

## *Datura ferox*

### **Common name:**

Fierce Thornapple, Long-spine Thornapple,

### **Palatability to Livestock:**

Seldom eaten.

### **Toxicity to Goats:**

High.

### **Toxicity to Other Species:**

Toxic to all livestock and humans.

### **Poisonous Principle:**

Tropane alkaloids, hyoscyne, scopolamine.

### **Effects:**

#### *Signs and symptoms;*

- . Excessive thirst,
- . Depressed breathing,
- . Convulsions, paralysis, coma, death,
- . Signs of poisoning vary enormously.

#### *Health and Production Problems;*

- . Most cases recover,
- . Inexperienced, hungry stock should be kept away from infested pastures.

#### *Treatment;*

- . Removing animals from where the plant is growing, often results in recovery.

### **Integrated Control Strategy:**

- . A "Declared weed" in Queensland, NT, Tasmania, Victoria and WA.
- . Herbicides will increase the palatability.

### **Comments:**

- . An upright annual, growing to 150cms tall.
- . The strong stems have a purple tinge.
- . Leaves are large, alternate, dark green and toothed, and have a pungent smell when crushed.
- . White flowers emerge singly in forks of branches on long stalks, long and trumpet shaped and almost as long as the leaves.

- . Late spring to autumn flowering.
- . When mature, the large brown fruits about 4 cms long, with green spines about 15 cms long, split open to release large black seeds.
- . Summer growing, and a problem in wet seasons and in crops.
- . Species difference is in the number of spines per fruit, 100 in the common thornapple, and 40 in the fierce thornapple.
- . Found in fertile soils, stock camps, yards, and roadsides.
- . All parts are toxic, however, seed contamination of feed grains is the most common cause of poisoning.
- . Rarely grazed due to bitter taste and odour.
- . Cattle may graze the leaves occasionally without ill effect.
